A first PostgreSQL review under your name.

I'm Kiran Sabne, an independent PostgreSQL engineer in India. If your client's database is slow, I'll do the first review free so you can inspect the work.

What to send

Describe what got slower, when it started and where PostgreSQL runs. Your client can run my read-only snapshot script and remove sensitive details before sharing the output.

What you get

I write three findings about what stands out, why it matters and what to check next. You keep the client relationship and decide how to present the findings.

See a report built on demo data. Read the case studies I reproduced on generated data.
